INTRODUCTION

The Shang-hai Heat and Thermal Power Plant (Wu-ching) is located approximately 8 nautical miles south of the center of Shang-hai on the west bank of the Huang-pu Chiang (River).

BASIC DESCRIPTION

The plant is bounded by the Huang-pu Chiang (River) on the east and is secured by a wall on the other three sides. It occupies an area measuring approximately 2,080 by 1,685 feet. The plant is coal operated and has extensive coal off-loading and storage facilities adjacent to the river. A rail spur enters the plant but does not service the coal conveyors and preparation facilities.

Between the date of the latest imagery used in the referenced report, the boilerhouse was enlarged and an additional double boiler unit was installed. On imagery of another addition to the boilerhouse and an addition to the generator hall were observed in early stages of construction. When these additions are complete, the plant will have eight boilers and possibly eight turbogenerators.

TCS - 18729/69

25X1D

On all referenced imagery except light to moderate smoke was observed emanating from the southern stack attached to the boilerhouse, while heavy smoke was emanating from the northern stack. On imagery of no smoke was observed emanating from the plant, but an adequate supply of coal was available.
